

Patient Name: Bradforth, Braden  
 Incident Number: 18082013

**Narrative:** Finney County EMS Unit 97 was dispatched to 801 N Campus for a male subject unresponsive is breathing. Upon arrival a patients teammate meets at unit and states patient is in between buildings. Teammate states they had an intense workout one hour prior and then found patient between buildings unresponsive. Several GCCC coaches are nearby and one states patient has been down around 20-30 minutes before teammates found him and they contacted EMS. At this time coaches made all players go back to rooms so any witness(es), if any, were not present at this time. Patient was found sitting slouched over with his head leaning on the building in a small walk area between two buildings. Patient was unresponsive but breathing and had a radial pulse. Patient was moaning and was wet. There was also a lot of water on sidewalk around him. Patient would not respond to EMS when called name or given a sternal rub. Coaches state that they had an intense cardio workout prior and had a meeting after and were unable to locate patient after meeting. Teammates then found patient unresponsive leaning next to building. Coaches were unable to provide information regarding incident. Coaches were unsure if patient hit head, fainted, or anything regarding what happened. Coaches were only able to provide minimal patient history. Coach states patient had asthma and used an inhaler. Coaches also stated he had seasonal allergies. They were unable to provide any other past medical history on patient. A BGL of 141mg/dl was taken by C. Macias. Patient was log rolled onto soft stretcher. Patient began vomiting and was turned to side as he continued to vomit. Once patient finished vomiting, EMS and GCCC coaches assisted in moving patient to cot via soft stretcher. Patient was secured X3 and positioned in high fowlers. Patient was moved into back of unit. One Coach states they wet patient with hose to see if they could get him to respond and he would not so that is when they contacted EMS. In back of unit, vitals were taken as noted. Monitor was placed on patient showing a rhythm of sinus tachycardia at a rate of 178. An NPA 32G was placed in left nare by J. Good and oxygen was given via nonrebreather at 15lpm. No response was given when NPA was placed. Initial O2 sats were 92-94 and improved to upper 90s. An IV was attempted by C. Macias in right hand with a 18G and was unsuccessful. An IO was placed in the left tibia by C. Macias with a 15G, 25mm needle and secured with two 2 inch gauze wraps. Patient showed no response to IO being placed. 40mg of Lidocaine was given through IO and flushed with a 10cc bolus. A pressure bag was applied to a 1000ml bag of Normal Saline and given wide open via IO. Pupils were dilated with sluggish reactivity. As Unit 97 continued patient care, Unit 94 arrived and drove Unit 97 to hospital with lights and sirens. En route a nasal cannula capnography was placed by J. Good. C. Macias administered 2ml of Naloxone via IO. Patient showed no response to Naloxone. Vitals were repeated as noted. A second blood pressure was unable to obtain due to motion of truck. Radio report was given to advise SCH on patient condition. Unit 97 arrived to SCH and transferred care to ED, room 3. At this time approximately 750ml of Normal Saline was given. Remaining patient information was given at bedside to ED Doctor and nurses. Grace Donecker, ED healthcare provider, signed authorization form due to patient being unresponsive. Unit 97 cleared of ED and returned back to service.

Christine Macias, Paramedic  
 James Good, Paramedic

**Activities**

**Vitals**

Time	PTA	Cardiac Rhythm	BP	Pulse	Rhythm	Resp	Effort	SpO2	BG	CO2	Pain	Stroke Scale
22:24:00	No	Sinus Tachycardia	79/59	169	Regular	20	Labored	94	141			
22:34:00	No		/	166				97		25		

**GCS**

Time	GCS	Eye	Motor	Verbal	Score Qualifier
22:24:00	4	1 - No eye movement when assessed (All Age Groups)	1 - No Motor Response (All Age Groups)	2 - Incomprehensible sounds (>2 Years); Inconsolable, agitated	Initial GCS has legitimate values without interventions such as intubation and sedation
22:34:00	4	1 - No eye movement when assessed (All Age Groups)	1 - No Motor Response (All Age Groups)	2 - Incomprehensible sounds (>2 Years); Inconsolable, agitated	Initial GCS has legitimate values without interventions such as intubation and sedation
